

## MAINTENANCE POINTS TO FOLLOW

Use 93 octane fuel with ethanol treatment in fuel tanks

Burn out fuel if engine will sit too long without running

Fuel and ethanol will separate within 60 days

Check oil level regularly but do NOT overfill oil container

Walk behinds use 2/3 quart of oil and riders use 1 ½ quarts

Change oil if dark black or the oil smells burned

Keep oil side of engine up and level or below fuel/carburetor

Clean air filter of dirt and debris regularly

Do not cut grass too low or allow blades to hit objects

If grass is too tall, cut yard once high and once lower

Clean under plastic self-propel cover to keep pulley/belt free

Clean under the mower deck if the grass is wet

Clean your equipment after each use, even if you are tired

Spray wheel adjusters with WD-40 type lubricant occasionally

Lift the drive wheels off the ground when pulling in reverse

This will protect your drive belt, cable and pulley
